The John A. Burns School of Medicine (JABSOM) strives to improve the quality, effectiveness, and equity of health care delivery in Hawai‘i and the Pacific region. The school provides opportunity for qualified residents of Hawai‘i and the Pacific Islands, including students from various underrepresented socioeconomic and minority groups to qualify for an MD degree; provides MD graduates with competency to enter postgraduate programs; and provides residency training programs with emphasis on primary-care specialties.

The school also administers graduate research and professional programs that lead to MS and PhD degrees in the basics medical sciences and health-related fields; MS degree in Communications Sciences and Disorders; and, BS and a post-baccalaureate certificate in medical technology. Medical school faculty participate in undergraduate courses for majors in nursing, dental hygiene, biology, nutrition, and related fields. In addition, the medical school, in partnership with the Hawai‘i Medical Association and the Hawai‘i Consortium for Continuing Medical Education, sponsors continuing medical education for physicians in the state of Hawai‘i.

The school provides instruction for six major categories of students:
1. Candidates for the MD degree who are admitted directly by JABSOM’s own admissions committee.
2. Candidates for MS degrees in biomedical sciences (with concentrations in cell and molecular biology, clinical translational research, developmental and reproductive biology, and tropical medicine), or in communication sciences and disorders apply through the Graduate Division of UH Mānoa;
3. Candidates for PhD degrees in biomedical sciences with concentrations in cell and molecular biology, epidemiology, developmental and reproductive biology, and tropical medicine who apply through Graduate Division of UH Mānoa;
4. Candidates for undergraduate degrees in medical technology, who apply through the UH Mānoa Admissions Office; and
5. Candidates currently enrolled in the Doctor of Medicine Early Acceptance Program who are admitted by JABSOM’s admissions committee.

In addition, a post-baccalaureate certificate for medical technology clinical training is offered.

The Kaka‘ako Waterfront Complex

In 2005, the John A. Burns School of Medicine relocated to a new 9.898 acre site in Kaka‘ako, on the water’s edge, between Waikiki and downtown Honolulu. The school’s previous location, the 43-year-old Biomedical Sciences building on the Mānoa campus, continues to be occupied by the Department of Medical Technology, and by various research units. The school complex functions as an economic engine for the state that will create quality employment opportunities, increase biomedical research activity, and be a stimulus for the biotechnical industry in Hawai‘i.
Target areas of research, which include innovations in problem-based learning medical education, are retrovirology/infectious diseases/AIDS, molecular biology/genetics/neuroscience, genomic medicine, proteomics, and bioinformatics/computational biology.

The campus includes an incubator center (leaseable research space) to provide biotechnology and bioscience companies a campus-like environment enabling collaboration with academic researchers. A major medical research center, with surrounding space for such companies, as well as Honolulu’s technology infrastructure and ties to Asia and the Pacific, will make the city of Honolulu a prime environment for the growing technology and biomedical research industries.

The school is accredited by the Liaison Committee for Medical Education (LCME) of the Association of American Medical Colleges and the Residency and Fellowship Programs are accredited by the Accreditation Council on Graduate Medical Education (ACGME).

Additionally, all civilian postgraduate medical education programs in Hawai‘i hospitals are accredited as UH John A. Burns School of Medicine-sponsored residency programs by the ACGME. Approximately 250 physicians (employees of Hawai‘i Residency Programs, Inc.) within 14 training programs serve as house staff members in these hospitals under the direction of medical school faculty from eight clinical departments.

Oversight is provided by the Designated Institutional Official (DIO), Continuing Medical Education (CME) programs are accredited by the Hawai‘i Consortium for Continuing Medical Education (HCCME), a liaison committee between the Hawai‘i Medical Association and JABSOM, Medical Technology (MEDT) and Communication Sciences and Disorders (CSD) are accredited by National Accrediting Agency for Clinical Laboratory Sciences and American Speech-Language-Hearing Association respectively.

**Affiliations**
The school maintains affiliations with facilities for medical student and resident clinical training that include the following: Castle Medical Center, Hawai‘i State Hospital, Hilo Medical Center, Kalahi-Palama Health Center, Kaiser Permanente Moanalua Medical Center & Clinic, Kapiolani Medical Center for Women and Children, Kapiolani Medical Center at Pali Momi, Kokua Kalihi Valley Health Center, Kuakini Health Systems, Leah Hospital, Maui Memorial Medical Center, The Queen’s Medical Center, Queen Emma Clinics, Rehabilitation Hospital of the Pacific, Shriners Hospital for Children, Spark Matsunaga VA Medical Center, Straub Clinic and Hospital, Tripler Army Medical Center, Wah maka General Hospital, and The Physician Center.

**Degrees**
**Bachelor’s Degrees:** BS in medical technology

**Master’s Degrees:** MS in biomedical sciences (cell and molecular biology, developmental and reproductive biology, and tropical medicine); MS in clinical and translational research; MS in communication sciences and disorders

**Professional Degree:** MD

**Doctoral Degrees:** PhD in biomedical sciences (cell and molecular biology, and tropical medicine); PhD in developmental and reproductive biology

**Advising**
Premedical advising is available through the Pre-Health/Pre-Law Advising Center, Sinclair Library 108.

**Academic Policies**
Undergraduate and graduate students in the School of Medicine must adhere to the academic policies of UH Mānoa. Medical students are exempted from certain UH Mānoa policies and instead must follow academic policies germane to the MD program. Copies of relevant policies are available in JABSOM’s Office of Student Affairs.

**MD Program**
The MD program follows a problem-based curriculum, which was implemented in fall 1989 and includes the following key features: knowledge is acquired in problem-based modules; self-directed learning is fostered in small group tutorials; students are involved actively in the learning process, not simply passive recipients of information; the small group leaders function as facilitators of learning; content experts function as resources to the learning process; laboratory exercises, demonstrations, the library and audiovisual-computer centers supplement faculty input; basic sciences are learned primarily through demonstrations, the library and audiovisual-computer centers supplement faculty input; basic sciences are learned primarily in the context of solving clinical problems; students are trained to think critically and to evaluate new information and research data; and evaluation of students is based on competence in a variety of problem-solving exercises.

The learning activities in the first two years of the curriculum take place in the school’s state-of-the-art Medical Education Building and in community health sites. The advanced clinical instruction that constitutes the bulk of the second two years of instruction takes place in affiliated community hospitals and clinics.

**Admission Requirements/Application Process**
Candidates for MD training must complete a minimum of 90 college-level semester credit hours of which the following specific science coursework is required for entry into the MD curriculum:

- 8 semester credit hours of biology with lab
- 8 semester credit hours of general physics with lab
- 8 semester credit hours of general chemistry with lab
- 8 semester credit hours of organic chemistry with lab
Each course should be acceptable for students majoring in the above science disciplines. Additional enrichment in the biological and social sciences is encouraged. Applicants must also be fully competent in reading, speaking, and writing the English language.

Applicants are required to apply through the American Medical Colleges Application Service (AMCAS). The service permits an applicant to file a single web-based application, which is forwarded to participating medical schools as designated on the AMCAS application. AMCAS will implement a criminal background check on applicants applying to medical schools. The AMCAS application is available from June 1 at the AMCAS website: www.aamc.org. The deadline to transmit the application to AMCAS is November 1 for regular admission (EST) or August 1 (EST) for Early Decision and Doctor of Medicine Early Acceptance Program Students.

Applicants must also take the nationally administered Medical College Admissions Test (MCAT), which deals with knowledge of the biological and biochemical foundations of living systems; chemical and physical foundations of biological systems; psychological, social, and biological foundations of behavior; and critical analysis and reasoning skills. MCAT must be taken within three years of an applicant’s anticipated matriculation to medical school. The latest MCAT’s screened or re-screened in the admissions process is September of the year of application (May for Early Decision).

Applicants who achieve the required screening cut-off points will be requested to submit additional materials and invited for interviews. 72 JABSOM participants in the AAMC-facilitated Criminal Background Check Service and MD candidates are accepted to the entering first-year class.

Inquiries regarding admissions should be directed to the Office of Admissions, John A. Burns School of Medicine, 651 Ilalo Street, MEB 3rd floor, Honolulu, HI 96813 or via email medadmin@hawaii.edu. Further information may be obtained on the web at jabsom.hawaii.edu.

Honors and Awards

Alpha Omega Alpha is the honorary society for medical students.

Graduate Medical Education Programs

Graduate medical education programs in Hawai’i hospitals are in family medicine, sports medicine, internal medicine, geriatric medicine, obstetrics and gynecology, orthopaedic surgery, pathology, pediatrics, neonatal-perinatal medicine, developmental-behavioral pediatrics, psychiatry (adult, child and adolescent, geriatric, addiction), general surgery, surgical critical care, cardiology, and transitional year. Also offered are a fellowship in maternal-fetal medicine accredited by the American Board of Obstetrics and Gynecology, and a fellowship in addiction medicine leading to certification by the American Board of Addiction Medicine. The UH John A. Burns School of Medicine acts as the institutional sponsor for these residency training programs. Approximately 250 physicians are involved in training, which lasts one to seven years. These physicians serve as members of the house staff in the affiliated hospitals while studying their chosen specialty.

The medical school also conducts a graduate medical education program at Chubu Hospital in Okinawa for graduates of Japanese medical schools.

Graduate Programs

Refer to the department/program sections of the Catalog for more information on each graduate program. Note: Information on the clinical translational research program is listed under the Department of Complementary and Integrative Medicine and information on the cell and molecular biology graduate program is located in the “Interdisciplinary Programs” section of the Catalog.

Graduate program inquiries should be directed to the appropriate program chair. General information is available on the web at jabsom.hawaii.edu/ed-programs/masters-phd/.

Special Programs

Hawai’i/Pacific Basin Area Health Education Center (AHEC)

The Hawai’i/Pacific Basin Area Health Education Center (AHEC) supports health professions training experiences in rural and under-served areas of Hawai’i and the U.S.-Affiliated Pacific Islands (Guam, American Samoa, Commonwealth of the Northern Mariana Islands, Republic of the Marshall Islands, Republic of Palau, and Federated States of Micronesia). Training experiences can be preceptorships, clerkships, electives,
cultural immersion experiences, or interprofessional training experiences such as the Rural Health Training Initiative in collaboration with the VA. AHEC supports continuity of rural training for students wishing to perform training experiences in a particular rural or under-served area during multiple years of their training. AHEC staff perform and support health careers recruitment programs across the state, support use of video teleconferencing for health education purposes, and hold the Hawai‘i Health Workforce Summit every September. Finally, AHEC is conducting a statewide physician workforce assessment and students can participate in studying aspects of the workforce, such as migration patterns and use of telehealth.

AHEC is funded by the U.S. Department of Health and Human Services, Health Resources and Services Administration. The federal mandate is to improve the diversity, distribution, and quality of the health professions workforce. The mission of Hawai‘i/Pacific Basin AHEC is: To improve the health of the under-served through education. Activities focus on four primary areas: 1) Health education and recruitment to health professions for students across the region from kindergarten through college; 2) Educating health professions students in rural and under-served areas, often in interdisciplinary teams; 3) Recruitment, retention, and continuing education of practicing health professionals in medically under-served areas; and 4) Providing video connectivity for health education, communication, and other health care services to rural and under-served areas across the state through methodologies such as Project ECHO. Contact Dr. Kelley Withy for more information at withy@hawaii.rr.com, (808) 692-1060.

Overseas Programs
The school plays an extensive training role at locations outside Hawai‘i and expects that its involvement in the Pacific and Asia regions will continue. In the scattered islands of Micronesia, the school has trained medical officers (MOs) and physician assistants to bring primary care to a widely dispersed population. The curricula were relevant to the clinical and community health needs of the Pacific Basin. Graduates of the MO program received a Diploma in Community Health, Medicine, and Surgery. Training of other health professionals in the Pacific Basin area continues. On Okinawa, the school conducts a residency training program for graduates of Japanese medical schools. This program is financed by the Okinawa prefectural government. The school conducts a medical student exchange program with affiliated medical schools and hospitals in Korea, Thailand, the Philippines, Japan, Indonesia, Taiwan, Australia, and New Zealand.
The Academic Program
The Department of Anatomy, Biochemistry, and Physiology supports the interdisciplinary nature of modern biomedical research and exposes undergraduate medical and graduate students to the type of academic research environment they will encounter in their professional career. The department was formed in acknowledgement of the MD program's ongoing need for discipline-based expertise in the areas of anatomy, biochemistry, physiology, and reproductive biology, which provides a broad base of knowledge in biological structure and function from the molecular level to the body as a whole.

The department offers upper- and lower-level courses in biochemistry and physiology as preparatory course work for prospective medical students as well as 500-level electives in human anatomy and physiology for medical students that supplement knowledge gained in the tutorials. The training of medical students and post-graduate training of physicians would not be possible without the department's Willed Body Program.

Students seeking health-related careers in areas such as dentistry, medicine, nursing, nutrition, pharmacology, physical and occupational therapy, public health, and kinesiology need many of the department’s physiology and biochemistry courses. Formal programs of study leading to MS and PhD degrees in developmental and reproductive biology are also offered. These students may elect to conduct research at the molecular or cellular level, on organs or on the whole animal, qualified graduate students have the opportunity to work with faculty from other JABSOM departments and programs within the university system as well.

The department also hosts the Graduate Program in Developmental and Reproductive Biology (DRB). The DRB MS program requires a combination of course work and original research, the latter forming the basis of the student’s thesis.

The DRB PhD program also requires a combination of coursework and original research. It prepares students for research careers at universities, hospitals, government laboratories, and large pharmaceutical companies and for teaching careers in universities, community colleges, and high schools. Both MS and PhD candidates must take a written qualifying examination, and PhD candidates must take an oral comprehensive examination. The MS and PhD candidates must also submit and defend their thesis or dissertation, respectively. PhD graduates usually obtain postdoctoral positions elsewhere as further preparation for a career in teaching and research at the university level.

The requirements for admission can be found at the Graduate Division website: manoa.hawaii.edu/graduate/ and the DRB Graduate Program website: www3.jabsom.hawaii.edu/Grad_DRB/index.html.

The department’s developmental and reproductive biology faculty are world-renowned for their research in the areas of gametogenesis, fertilization, reproductive endocrinology, and developmental biology. Department faculty established the Institute for Biogenesis Research, www.ibr.hawaii.edu, a Center of Biomedical Excellence focused on the study of mammalian developmental and reproductive biology. Department faculty also have appointments in the Pacific Biosciences Research Center, JABSOM Obstetrics and Gynecology Department, and the University of Hawai’i Cancer Center.

Cell and Molecular Biology

Faculty
*M. Berry, PhD (Chair)—selenoproteins, antioxidants and human diseases
*F. P. Bellinger, PhD—trace elements in brain function
P. Bertino, PhD—vaccine strategies and immunotherapy
*M. Gerschenson, PhD—mitochondrial medicine
*D. S. Haymer, PhD—DNA analysis in human forensics and molecular genetic variations in populations
*P. Hoffmann, PhD—selenoproteins in inflammation, immunity and cancer
*N. G. James, PhD—neurodegeneration, protein interactions, fluorescence microscopy
*D. M. Jameson, PhD—fluorescence spectroscopy; biomolecular dynamics and interactions; ribosomal proteins
*O. LeSaux, PhD—genetic disorders; dystrophic calcification
*R. A. Nichols, PhD—neuropharmacology, neuroscience and physiology
*J. Panee, PhD—biomedical research ethics in health consequences of marijuana use
*M. W. Pits, PhD—selenoproteins in metabolism and neurodevelopment
*L. A. Scale, PhD—comparative endocrinology, metabolic syndrome, obesity
*S. E. Seifried, PhD—bioinformatics, bioinformatics and computational biology
*A. Stokes, PhD—physiology and function of ion channel proteins in cardiometabolic diseases
*C. Todorovic, PhD—neurobiology of learning and memory, neuropharmacology

Adjunct Faculty
A. Fleig, PhD—electrophysiology (patch-clamp); calcium signaling in muscle cells; regulation of calcium signaling; cellular neuroimmunology
K. Pellegrin, PhD—pharmacy, psychology, research training
R. Penner, PhD—electrophysiology (patch-clamp); intra- and intercellular signal transduction; regulation of calcium signaling; cellular neuroimmunology
J. Ramos, PhD—MAP kinase signaling and drug discovery
H. Turner, PhD—immunogenetics, cannabinoid receptors, cell signaling
M. Tuthill, PhD—use of recombinant technologies in the production of monoclonal antibodies and gene expression proﬁles of bacterial and human platforms

The Academic Program
Faculty in the Department of Cell and Molecular Biology have ongoing research programs in areas such as genetics, cell biology, biochemistry, and neurophysiology. The department also provides instruction in the basic principles and concepts of genetics, biochemistry, and molecular biology to medical students, graduate students from various disciplines, and undergraduates.

The faculty also participate in the training of PhD and MS graduate students in the interdisciplinary Cell and Molecular Biology Graduate Program. This program brings

C. Tanaka, PhD—audiology
G. Wallace, PhD—speech-language pathology

Degrees Offered: MS in communication sciences and disorders

**The Academic Program**

The UH Department of Communication Sciences and Disorders (UH CSD) offers a Master of Science (MS) degree in CSD with emphasis in speech-language pathology (SLP). Speech-language pathologists work to prevent, assess, diagnose, and treat speech, language, social communication, cognitive-communication, and swallowing disorders in children and adults. As a department of the John A. Burns School of Medicine (JABSOM), UH CSD is located in Kaka'ako, adjacent to the JABSOM campus.

The UH CSD program is accredited by the Council on Academic Accreditation in Audiology and Speech-Language Pathology (CAA) of the American Speech-Language-Hearing Association (ASHA). UH CSD is the only program in the state of Hawai'i that is accredited by ASHA’s CAA. Graduates of CAA-accredited programs are educated with a core set of knowledge and skills required for entry into independent professional practice. Students who earn an MS degree from UH CSD are eligible to apply for the Certificate of Clinical Competence in Speech-Language Pathology (CCC-SLP) from ASHA after successful completion of a post-graduate Clinical Fellowship.

The UH CSD department defines its mission using the C.A.R.E.S. Model to establish a center of excellence for:
- **Clinical** services for people challenged with speech-language, cognitive, swallowing, hearing and related disorders;
- **Administrative** infrastructure for internal and external collaboration and support;
- **Research** to support evidence-based practice;
- **Educational** training to prepare highly qualified professionals in communication sciences and disorders;
- **Service** to develop public awareness and promote participation at the university, state, national, and international levels.

**Plans of Study for the UH CSD Master of Science (MS) Degree**

The MS degree program is typically completed in 2 years across 6 semesters including summer sessions. Both Master’s Plan A (thesis, 81 credits) and Plan B (non-thesis, 74 credits) are options for graduate study. Clinical education is a strength of the UH CSD program. The internship rotations at the UH Speech and Hearing Clinic (UHSHC) and externship facilities in Hawai'i provide students with a breadth and depth of supervised clinical experiences to gain knowledge and skills in preparation for entry into the profession.

To complete the program, students must fulfill the following graduation requirements:
- Complete required course work in the UH CSD Program of Study with a minimum grade point average (GPA) of 3.0 and a minimum passing grade of B- (80%) for all required courses and clinical practicum;
- Earn a minimum of 400 clock hours of supervised clinical experience in the practice of speech-language pathology (25 hours of guided clinical observation, 375 hours in direct client/patient contact, at least 325 hours while enrolled in graduate study);
- Demonstrate achievement of the UH CSD Student Learning Outcomes (SLO) to fulfill standards for the ASHA Clinical Certification in Speech-Language Pathology (CCC-SLP);
- Complete an Individualized Directed Research project (Plan B) or thesis (Plan A) under supervision of a research mentor or thesis advisor to fulfill the research requirement, which provides students with the foundation to engage in evidence-based practice;
- Earn a score of 162 or higher on the Praxis® Examination in Speech-Language Pathology. The exam assess knowledge and current practices in SLP, and is administered by the Educational Testing Service (ETS), www.asha.org/practice-portal.

* Graduate Faculty
**Academic Advising**

Students who are interested in pursuing a master’s degree in CSD may contact the UH CSD department by email (uhmcsd@hawaii.edu) or phone (808-692-1581). The UH CSD website (csd.jabsom.hawaii.edu/) provides information on the program including admission requirements. Academic advising for UH undergraduate students is available from the Pre-Health Pre-Law Advising Center (manoa.hawaii.edu/undergrad/PAC/).

**Complementary and Integrative Medicine**

John A. Burns School of Medicine
651 Ilalo Street, MEB 411
Honolulu, HI 96813
Tel: (808) 692-1840
Web: jabsom.hawaii.edu/departments/cim/

**Faculty**

*J. J. Chen, PhD (Interim Chair, Associate Graduate Program Chair)—biostatistics
*K. Ciszar, PhD (Graduate Program Chair)—medical genetics
*H. Ahn, PhD—biostatistics
*A. Brown, PhD—nutrition and disease
*J. Davis, PhD—biostatistics
*Y. Deng, PhD—bioinformatics
*V. Khadka PhD—bioinformatics
*E. Lim, PhD—biostatistics
*C. Siriwardhana, PhD—biostatistics

**Degree Offered:** MS in clinical and translational research

**The Academic Program**

Faculty of the Department of Complementary & Integrative Medicine (CIM) conduct original and collaborative research in integrative medicine and quantitative health sciences, including biostatistics and bioinformatics. The CIM department also hosts two JABSOM quantitative health sciences core facilities, Biostatistics Core and Bioinformatics Core.

CIM faculty also provide education and training in clinical research, quantitative health sciences, and integrative medicine. The department houses the graduate program in clinical and translational research.

**Graduate Study**

The Clinical and Translational Research (CTR) graduate program will prepare graduates with skills for successful careers in clinical and translational research and research support. The CTR program leading to a MS degree is currently offered with two tracks, both available in either Plan A (thesis option) or Plan B, (capstone both project option): Clinical Research (CR) and Quantitative Health Sciences (QHS).

The CR track focuses on the study of methods suitable to investigate clinical research topics. Students enrolled in the CR track are required to complete a combination of course work and clinical research. The competency domains include clinical and translational research, quantitative health skill, professionalism, communication, and interdisciplinary collaboration. Students will also develop the ability to identify and resolve ethical issues in clinical research, to ensure the safeguarding of human subjects, and to understand the workings of Institutional Review Boards and relevant organizational requirements. In addition, students will develop and/or increase their capacity in obtaining research funding from agencies such as the National Institute of Health (NIH) and others. The QHS track contributes to a field that requires specific analytic skills and is one that is currently lacking sufficient numbers of experts. Students enrolled in the QHS track will acquire skills in biostatistics and bioinformatics, and master the scientific principles and methodologies that underlie basic science, and clinical and translational research methods.

In addition to offering knowledge and skills needed for careers in clinical and translational research, the program functions as a supportive mechanism for newly trained investigators, actively facilitating career development and encouraging research collaborations, particularly those related to health disparities research. By providing high quality training to doctoral and post-doctoral candidates, the program aims to increase the critical mass of clinical and translational research at UH, including its minority investigators. Targeting junior faculty, fellows, residents, and doctoral candidates from biomedical sciences, nursing, social work, psychology and public health, the interdisciplinary nature of the program broadens students’ perspectives and increases opportunities for innovative, cross-disciplinary collaborations in clinical and translational research. Graduates of the program pursue research and research support careers in academia, government laboratories, healthcare organizations, and pharmaceutical companies.

Regarding long-term career outlook and job opportunities for program graduates, the Bureau of Labor Statistics predicts that the employment in clinical and associated research will grow overall by 8% in the U.S. The State of Hawai‘i projects a higher, 34.8%, growth rate in medical scientists, and a 13.9% growth rate in computer and mathematics-related occupations by 2020.
Family Medicine and Community Health

The Physician Center at Mililani

K. Soin, MD, MPH—family medicine and community health
C. W. Tseng, MD, MPH—family medicine and community health
S. Yamada, MD, MPH—family medicine and community health

Degree Offered: MD

The Academic Program
The Department of Family Medicine and Community Health (DFMCH) is focused on community-based collaborations to improve patient outcomes across the lifecycle through direct clinical care, primary care workforce development, and research. The department has a particular focus on caring for cross-cultural, rural, and under-served communities in Hawai’i and throughout the Pacific. The department, in conjunction with our partner hospitals, sponsors a three-year ACGME accredited Family Medicine Residency Program and a one-year ACGME accredited Sports Medicine Fellowship.

Teaching goals for students, residents, and fellows are based on a philosophy of contextualized care that understands health and illness in relation to the individual, family, and community, and responds not only to episodes of illness, but also attempts to understand and address the broader social determinants of health. Medical student instruction focuses on basic conceptual tools and clinical strategies in real world settings through community based preceptorships.

Geriatric Medicine

John A. Burns School of Medicine
347 N. Kuakini Street HPM-9
Honolulu, HI 96817
Tel: (808) 523-8461
Fax: (808) 528-1897
Web: geriatrics.jabsom.hawaii.edu

Faculty
K. H. Masaki, MD (Chair)—geriatric medicine
S. Ahsan, MD—geriatric medicine
R. Fernandes, MD, MPH—geriatric medicine
D. Fischberg, MD—pain and palliative medicine
M. Inaba, MD, PhD—geriatric medicine
P. Lorenzo, MD—geriatric medicine
K. Lubimir, MD—geriatric medicine
L. Okamoto, MD—geriatric medicine
B. Rodriguez, MD, PhD—epidemiology
C. Takenaka, MD—geriatric medicine
B. Tamura, MD—geriatric medicine
M. Uechi, MD—geriatric medicine
A. Wen, MD—geriatric medicine
B. Wilcox, MD—geriatric medicine

Degree Offered: MD

The Academic Program
Geriatric medicine is dedicated to the care of older people and to healthy aging throughout life, so that the frailties and disabilities common in older years can be prevented. To provide comprehensive care, geriatrics is often interdisciplinary, and clinical instruction takes place in a wide variety of settings, including outpatient, acute hospital, nursing home, retirement community, home care, rehabilitation, and palliative care settings. As an age-based specialty like pediatric medicine, geriatric medicine includes aspects of internal medicine, pharmacology, psychiatry, adult development, family medicine, neurology, urology, gynecology, rehabilitation, and palliative medicine.

The Department of Geriatric Medicine provides education for: medical students; residents in internal medicine, family medicine, psychiatry, and other specialties; fellows in Geriatric Medicine and Geriatric Psychiatry; practicing physicians; and allied health professionals and students in the field of aging. The fully accredited Geriatric Medicine Fellowship Program is for physicians who are graduates of either internal medicine or family medicine residency programs. The first year of fellowship training is designed to lead to eligibility for board certification in geriatric medicine. Additional years of fellowship are devoted to research, consultative medicine, medical education, and medical administration.

The Division of Palliative Medicine is part of the Department of Geriatric Medicine. Many of the department’s faculty members have board certification in both Geriatric Medicine and Palliative Medicine.

The Department of Geriatric Medicine is involved in an extensive array of research programs, thus providing training and experience in research for students at all levels.
Medical Technology

Biomedical Sciences C-206
1960 East-West Road
Honolulu, HI 96822
Tel: (808) 956-8557
Web: medtech.jabsom.hawaii.edu

Faculty
D. Y. Teshima, MPH (Chair)—medical technology
S. M. Gon, MPH—medical technology
J. S. Ha, PhD—clinical biochemistry
R. M. Yamaguchi, MPH—medical technology

Degree and Certificate Offered: BS in medical technology

The Academic Program
Medical technology (MEDT) is a health-care profession in which medical technologists (medical laboratory scientists) perform laboratory procedures used for the promotion of health and the diagnosis, monitoring, and treatment of diseases. Technical skills needed to carry out the tasks include microscopy, venipuncture, manipulation of various labware and operation of automated instruments. Results of these procedures are essential to the delivery of quality health care. The field is broad and involves several disciplines: chemistry, hematology, immunohematology (blood banking), immunology, and microbiology.

Medical technology is a constantly evolving profession. Advances in healthcare and new career opportunities have fueled the demand for medical laboratory scientists. Employment opportunities are in hospitals, physician’s offices, reference labs, DNA labs, research, veterinary clinics, and other labs. Education and training in medical technology also enables graduates to pursue careers as physicians, forensic scientists, researchers, educators, health administrators, consultants, and many more.

Admission Requirements
The curriculum is a career-pathway structure that begins with medical lab technician (MLT) associate degree at a community college and culminates in a BS degree in medical technology. Students master the basic skills and knowledge in medical laboratory as MLT, then clinical applications and problem solving skills that are required of the baccalaureate level practitioners are learned at UH Mānoa. Kapiolani Community College (KCC) offers an associate degree in MLT; 4303 Diamond Head Road, Honolulu, HI 96816; www.kapiolani.hawaii.edu/academics/programs-of-study/medical-laboratory-technician-program/; (808) 734-9270.

Among eligible candidates, 10 to 15 students will be selected by the Admissions Committee to be admitted. Eligibility criteria are:
- Associate degree in Medical Laboratory Technician (MLT).
- National certification as an MLT.
- Cumulative GPA of at least 2.5 in the MLT program.

While at KCC, students are encouraged to select courses applicable to UH Mānoa General Education, major requirements and prerequisites. Students considering matriculating to UH Mānoa should seek academic advising from advisors on either campus.

Medical technologists perform various procedures that directly impact patient care, so it is important that all applicants be able to perform certain essential functions. With appropriate accommodations, if needed, everyone must be able to perform the activities listed below. These skills are assessed in the MLT program. Additional professional skills are taught in classes after admission.
- Manipulate labware to transfer or prepare reagents and samples (e.g., charge hemocytometer, prepare blood smear).
- Operate simple instruments according to instructions (e.g., cell counter, centrifuge, spectrophotometer).
- Perform microscopic examinations on various specimens and report the results (e.g., leukocyte differential count, cell morphology, urinary sediments).
- Follow written and verbal directions to perform laboratory tests and report results.

Other Requirements
Medical technology majors are required to have professional liability insurance, which costs about $40 per year. Immunization for Hepatitis B virus is highly recommended. Clinical affiliates, for those who opt to participate in the post-graduate clinical training, may have additional requirements (e.g., vaccinations, CPR/AED training, criminal background check).

Advising
Students are encouraged to see a medical technology advisor as soon as possible and prior to each registration period. Appointments can be made through the department office.

Clinical Training
Clinical training at affiliated clinical labs in Hawai‘i follows graduation. Alternatively, as certified MLT, students may qualify for medical lab scientist (MLS) certification through work experience.

Accreditation
The program is accredited by the National Accrediting Agency for Clinical Laboratory Sciences, 5600 N. River Rd. Rosemont, IL 60018, phone (773) 714-8880, www.naacls.org.

Certification and Licensure
After clinical training, students are eligible to take a national certification exam. In Hawai‘i, state licensure is also required for employment.

Undergraduate Study
Bachelor’s Degree

Requirements
- Complete the degree requirements that satisfy UH Mānoa’s General Education Core requirements and program requirements. Second language is not required.
- Earn a minimum cumulative GPA of 2.0
- Submit by the specified deadline an application for graduation to the Cashier’s Office during the semester preceding the awarding of the degree.

Curriculum for Medical Technology
MEDT 151(2) is offered at UH Mānoa for those who start at UH Mānoa. MLT curriculum is offered at KCC.

* Graduate Faculty
Junior Year

- Semester 1: †MEDT 301 (3); †MEDT 331 (3); CHEM 272/L (3/2); PHYL 301 (4)
- Semester 2: †MEDT 431 (3); †MEDT 471 (4); CHEM 273 (3), BIOL 172 (3); PHYL 302 (4); TRMD 431 (2)

Senior Year

- Semester 1: †MEDT 451/L (1/2), †MEDT 472 (4), †MEDT 477 (2); †MICR 461 (3)
- Semester 2: †MEDT 464 (3); †MEDT 478 (2); †MEDT 481 (1); †MICR 463 (3), BIOL 275 (3)

For information on a Bachelor Degree Program Sheet, go to www.manoa.hawaii.edu/ovcaa/programsheets/.

For candidates who already have a Bachelor’s degree

If you already have a bachelor’s degree, and wish to obtain a second degree in Medical Technology but are not able to follow the MLT-MLS track, you may qualify for admission through the “Second Degree” route. Minimum qualifications:

- Completed a bachelor’s degree from an accredited university or college
- Minimum 2.5 cumulative and math/science GPA
- Completed required courses (up to 2 may be taken while on probationary status): CHEM 161/L, 162/L, 272/L, 273, BIOL 171/L, 172, 275, MATH 140 (or higher), MICR 351/L, MEDT 151, 251 (includes phlebotomy training)
- Apply to be admitted through the “Second Degree” route

Upon admission, student will be classified as an undergraduate student in Medical Technology, and must complete the major and graduation requirements as described above plus MEDT 302, MICR 461L and MICR 463L.

Contact the Department academic advisor for more detailed information.

Post-baccalaureate Study

Certificate for Clinical Training

†MEDT 591 (28)

B. Uyeno, MD—general internal medicine, pediatrics
T. Watai—internal medicine
M. Yee, MD—neurology

Degree Offered: MD

The Academic Program

Internal medicine is the medical discipline that specializes in the prevention, diagnosis, and management of illnesses in adults. The Department of Medicine contributes to the general education of medical students, and provides post-MD and continuing medical education in the discipline of internal medicine and its sub-specialties. Faculty also maintain active, funded research programs in HIV/acquired immunodeficiency syndrome (AIDS), cardiology, diabetes, neurology, respiratory diseases, and other medical conditions, in addition to patient-oriented, community-based, or medical education research. Faculty also provide direct patient care and medical services in hospital and outpatient settings, particularly to the under-served or under-insured. In delivering medical education, conducting research, and providing patient care, the department helps Hawai‘i meet its health care needs, develop vital work force, and advance our understanding of health disparities in the context of Hawai‘i’s unique ethnic and environmental diversity.

Education

The department provides education for medical students, interns and residents (post-MD students), faculty, and
practitioners. In the first two years of medical student education, departmental faculty hold key leadership and teaching roles in Problem-Based Learning, Colloquia, Basic Science Correlations, Clinical Skills Preceptorship, and many BIOM courses. In these early years, the curriculum integrates humanities, social sciences, and the physical and biological sciences. The curriculum also promotes skills in hypothesis formulation, data acquisition and evaluation, clinical problem-solving, and effective communication with patients, their families, and other members of the health team.

For third year students, the department coordinates required clerkships that provide students supervised, formative experiences in the evaluation and management of patients in hospital and outpatient settings. For fourth year medical students, faculty in general medicine and internal medicine sub-specialties also offer required and elective learning opportunities that focus on particular aspects of internal medicine. In brief, the department helps the learner achieve graduation objectives and helps assure accreditation of the school by the Liaison Committee on Medical Education.

The department also provides the faculty and the educational oversight for interns and residents in the UH Mānoa Internal Medicine Residency Program (UHIMRP), which is accredited by the American Council of Graduate Medical Education (ACGME). Each year, nearly 20 post-MD students complete the 3-year Categorical program. Faculty develop and deliver curricula that address fundamental concepts in general medicine and in each of the internal medicine sub-specialties: allergy and immunology, cardiology, critical care medicine, dermatology, endocrinology, gastroenterology, geriatric medicine, hematology, infectious diseases, nephrology, neurology, oncology, pulmonary diseases, and rheumatology. The curricula are delivered in inpatient and outpatient sites that provide opportunities for supervised direct patient care and that embody the practical experiences for which the internist must be prepared. They prepare the resident for certification by the American Board of Internal Medicine. Increasing emphasis on medical education and scholarship help assure that residents will learn and teach well beyond their graduation from the residency. Indeed, post-doctoral residents are integral to the education of our medical students.

As part of the departmental commitment to post-graduate training, the department also educates up to 6 preliminary residents who complete a year of internal medicine before focusing in neurology, dermatology, and other specialties. It shares in the education of as many as 9 transitional residents who complete a year of medical and surgical training before focusing in programs such as anesthesiology, ophthalmology, or radiology. Our faculty supervises rotations for residents in other disciplines, as required by their respective accrediting Boards. These include family practice and community medicine, obstetrics and gynecology, and psychiatry.

The department is also accredited by the American Consortium in Continuing Medical Education to provide weekly seminars and special learning activities in topics pertinent to the practicing internist. Through its regular evaluation and discourse with practicing physicians as well as academic researchers, the department shares scientific advances with the community and gains practical insights that help shape the education of our future physicians.

**Research**

Faculty are principal investigators of and contributors to several federally funded research programs, including the Hawai‘i Center for AIDS, the Center for Cardiovascular Research, Neuroscience and MR Research Program, and Asthma and Immunogenetics Research. Many ongoing translational and clinical research projects help address racial disparities in prevalence, detection, and management of illnesses. Reflecting the collaboration with basic scientists, several faculty also have adjunct appointments in basic science departments and the UH Cancer Center. Research in bioethics, medical education, public health, community outreach, and community-based participatory research promote teaching and learning approaches, and advance the health literacy of the medical and public communities. The diverse scientific and scholarly activities provide rich learning opportunities for UH Mānoa undergraduates, JABSOM medical students, UHIMRP residents, and practitioners.

**Service**

In addition to supporting department, school, and university needs, faculty also provide clinical services in settings that benefit under-served communities and that enhance medical student and post-doctoral learning. The faculty practice provides a continuum in the prevention, diagnosis, evaluation, and management of illness. Complex cases that result from interactions between genetics, environment, and culture benefit from multi-disciplinary inquiry and collegial discussion fostered by the medical school and its faculty.

**Native Hawaiian Health**

V. Wong, MD, MS—family medicine, faculty development
K. Yamauchi, MPA—post baccalaureate education, student recruitment and retention

The Academic Program

The mission of the Department of Native Hawaiian Health is to be a center of excellence in education, research, and quality health care practices committed to the optimal health and wellness of Kānaka ʻŌiwi, their families, and communities while embracing traditional Hawaiian values and practices. To accomplish this mission, the program will actively seek “grass-roots” partnerships with others in the community who share their vision of Kū Pono: Hawai‘i Maoli achieving optimal health and wellness.

Research efforts will be focused on reducing and eliminating health disparities in Native Hawaiians and other Pacific-based populations. This includes activities such as conducting hypothesis driven research, developing pilot studies, training new researchers and networking with Native Hawaiian communities to disseminate research information via the Center for Native and Pacific Health Disparities Research, the PILI ʻOhana Obesity study, the KaHOLO project, and other NIH funded grants.

Two programs are dedicated to increasing and improving the health workforce serving Hawai‘i, especially in Native Hawaiian communities: the ʻImi Ho‘ōla Post-Baccalaureate Program and the Native Hawaiian Center of Excellence.

ʻImi Ho‘ōla Post-Baccalaureate Program

ʻImi Ho‘ōla (Hawaiian for “those who seek to heal”) is a post-baccalaureate program designed to provide educational opportunities to students from disadvantaged backgrounds capable of succeeding in medical school. Although ʻImi Ho‘ōla is not limited to persons of Hawaiian, Filipino, Samoan, Chamorro, and Micronesian descent, a large number of these students are from disadvantaged socioeconomic and/or educational backgrounds and demonstrate a commitment to serve areas of need in Hawai‘i and the U.S.-Affiliated Pacific. ʻImi Ho‘ōla has expanded its outreach efforts and developed partnerships with local high schools, colleges, and community-based health organizations.

Native Hawaiian Center of Excellence (NHCOE)

NHCOE is funded through state, federal, and private funds and focuses on: (1) Enhancing the performance of Native Hawaiian medical students by offering support for USMLE board preparation and collaboration with JABSOM retention efforts; (2) Developing the research and teaching skills of JABSOM and Department of Native Hawaiian Health faculty through workshops, presentations, and faculty development activities; (3) Disseminating information resources for Native Hawaiian health, cultural competency, and curricula through conferences and workshops; (4) Offering an elective for first year medical students on introducing research and topics of Native Hawaiian health issues; (5) Promoting student training in rural areas by serving as a resource for students choosing to do electives in rural Native Hawaiian communities; and (6) Developing a competitive applicant pool through active involvement in the establishment of collaborative efforts with colleges and high schools to develop programs aimed at increasing the numbers of Native Hawaiian medical students.

D. R. Towner, MD—obstetrics, maternal fetal medicine, medical genetics
T. E. Wright, MD, MS—obstetrics and gynecology
G. C. Yokochi, MD—obstetrics and gynecology

Degree Offered: MD

The Academic Program

Instruction in obstetrics and gynecology (OBGN) is divided into five general areas: basic clerkship, student electives, residency training, fellowship training, and continuing medical education. The main objectives of the clerkship during the third year is to give students an overall perspective of the field, an
in-depth knowledge of women’s health care and the ability to perform those technical skills necessary for the care of women. The elective experiences are developed to allow interested students the opportunity to acquire detailed knowledge and experience in women’s health care or within specific areas of care.

The department directs a four-year residency training program for medical graduates who desire specialty training in the field. The MD education program is closely integrated with residency training to maintain communication and learning experience throughout training. The department has fellowships in Maternal Fetal Medicine and Family Planning. Research is focused in high-risk obstetrics, public health, health disparities, human reproduction, family planning, and human reproduction. The department is divided into the following divisions: endocrinology infertility, maternal-fetal medicine, obstetrics and gynecology-ambulatory and hospitalist, gynecologic oncology, urogynecology, research, imaging, and family planning.

Pathology
John A. Burns School of Medicine
651 Ilalo Street
Honolulu, HI 96813

K. S. Thompson, MD (Chair)—pediatric pathology, anatomic pathology, genetics
A. Powers, MD (Residency Program Director)—transfusion medicine, clinical pathology
D. Shimizu, MD (Assistant Residency Program Director)—GYN pathology, anatomic pathology
D. Horio, MD—anatomic and clinical pathology
B. J. Kaya, MD—neuropathology, anatomic pathology
W. Kim, MD—clinical pathology
C. Lum, MD—dermatopathology, molecular pathology
J. H. Uyehara-Lock, MD—neuropathology, anatomic pathology
K. Vierkueter, MD—OB/GYN pathology

Degree Offered: MD

The Academic Program
Pathology (PATH) is the study of aberrations or deviations of organs or systems that result in disease. Instruction in pathology is open to undergraduate, graduate, medical students, and residents. All medical students may elect to take PATH 515 as a part of the problem-based learning curriculum. The required PATH 541 provides essential autopsy experience for all second-, third-, and fourth-year medical students. Third and fourth-year students may choose electives PATH 545 and 599 that include instruction in laboratory medicine for the practicing physician, clinical pathology, anatomic pathology, clinical immunology, and molecular diagnostics and directed research projects.

The department directs an integrated residency program in pathology. Residents are based at Kaiser Hospital, Queen’s Medical Center, Kapiolani Medical Center for Women and Children, the Honolulu Medical Examiner Office, and the Blood Bank of Hawai‘i. Clinical faculty come from all the community hospitals and provide gross and microscopic specimens for demonstration, clinico-pathologic correlations, seminars, and lectures.

* Graduate Faculty
The Department of Pediatrics offers specialty training for the medical student, as well as post-MD residency training and subspecialty experience. The medical student curriculum consists of the core curriculum for pediatrics completed during the third year of the MD program. A wide variety of electives in different sub-specialties are offered during the fourth year of the MD program in addition to sub-internship opportunities in various clinical disciplines. The Post-MD residency program accommodates eight MDs (yearly) in a three year ACGME-accredited curriculum preparing them for a career in pediatrics or furthering their training in a subspecialty within pediatrics. There is also ACGME-accredited training in Neonatal Perinatal Medicine (Neonatology), which is a three year program following the Pediatric Residency Training and is jointly sponsored by Kapiolani Medical Center for Women and Children and Tripler Army Medical Center as the clinical training sites.

The Department of Pediatrics is very active in clinical and quality improvement research with majority of the activities being done at Kapiolani Medical Center for Women and Children.
biological basis of mental illness is one of the most exciting areas of medical research today and is revolutionizing our understanding of mind-body relationships.

The Department of Psychiatry contributes to the overall mission of the School of Medicine by providing leadership in psychiatric training, teaching, research, and services in Hawai‘i, Asia, and the Pacific Basin. The department is committed to expanding knowledge within a cross-cultural and bio-psycho-social framework.

Traditional courses have been replaced with the problem-based learning curriculum. Psychiatric issues are addressed throughout the curriculum but are particularly emphasized in the second year during the brain and behavior sub-unit of Unit MD6 and in the third year Psychiatry Clerkship.

**The Academic Program**

Surgery emphasizes the use of interventional techniques to treat injury and disease. The educational program encompasses the pathology, pathophysiology, diagnosis, treatment, and periooperative management of surgical disease and trauma. The department provides instruction to medical students in all surgical disciplines, as well as the related fields of anesthesiology, radiology, and emergency medicine. It directs general surgical and orthopedic residency programs, as well as a surgical critical care fellowship. Research and continuing medical education programs are provided.

* G. S. N. Hui, PhD—parasitology, immunology, cell biology
* K. J. Kallianpur Tata, PhD—brain imaging, neuroaids, HIV-associated neurocognitive disorder
* P. H. Kaufusi, PhD—pathogenesis of West Nile virus
* J. F. Kelley, PhD—pathogenesis of flaviviruses
* M. Kumar, PhD—virus host interaction
* A. Lehrer, PhD—molecular biology, virology, immunology
* F. Mercier, PhD—mechanisms controlling neural stem cell proliferation and differentiation in the adult brain
* F. D. Miller, PhD—epidemiology of infectious diseases
* L. Ndhlouv, MD, PhD—HIV immunology
* B. Shiramizu, MD—pathology of HIV-associated disorders

* Graduate Faculty

* Graduate Faculty
of these diseases. These studies can be laboratory-based systems, human ecology, microbial and vector ecology, diagnosis, prevention, control, treatment, socio-ecological including immunology, pathogenesis, ecology, epidemiology, and clinical medicine. The faculty employs a multidisciplinary approach, and bacterial encephalitis, malaria, tuberculosis, and Kawasaki disease. They cause, including dengue, West Nile, AIDS, hepatitis, viral infection of green turtles, aquaculture virology.

M. E. Melish, MD—staphylococcal infection and toxins, clinical infectious disease, Kawasaki syndrome

S. Prisic, PhD—molecular pathogenesis of mycobacterium tuberculosis

E. K. Tam, MD—inflammation, immunologic mechanisms of pulmonary diseases, genetic and environmental determinants of asthma

R. Yanagihara, MD—transdisciplinary investigations of emerging and re-emerging infectious diseases, use of infectious agents as biological markers to trace ancient and recent movements of human populations

Adjunct Faculty

V. E. Ansdell, MD—tropical and infectious diseases and clinical microbiology

M. J. Bankowski, PhD—clinical and molecular microbiology and infectious disease

S. N. Bennett, PhD—molecular evolution and epidemiology of emerging infectious diseases

B. R. Ellis, PhD—arbovirus and virus-vector interrelationships

A. Imrie, PhD—dengue immunology and epidemiology

J. Kim, MD—HIV vaccine development

A. T. Lehrer, PhD—viral vaccine development

M. M. Lieberman, PhD—arbovirus and vaccinology

Affiliate Graduate Faculty

J. Honda, PhD

K. L. Palmer, PhD—global public health and tropical diseases

Degrees Offered: MS in biomedical sciences (tropical medicine), PhD in biomedical sciences (tropical medicine)

The Academic Program

Tropical medicine is the study of diseases that occur more commonly in the tropical regions of the world. However, in today’s era of globalization and modern transportation, diseases that were once confined to the tropics have spread geographically and played a significant role in the 20th century global resurgence of infectious diseases. As such, research in the area of tropical medicine and medical microbiology has greatly increased in importance in the past 20 years. Tropical medicine faculty conduct studies on infectious organisms and the diseases they cause, including dengue, West Nile, AIDS, hepatitis, viral and bacterial encephalitis, malaria, tuberculosis, and Kawasaki disease. The faculty employs a multidisciplinary approach, including immunology, pathogenesis, ecology, epidemiology, diagnosis, prevention, control, treatment, socio-ecological systems, human ecology, microbial and vector ecology, environmental change, and participatory action research to answer fundamental questions associated with the pathogenesis of these diseases. These studies can be laboratory-based, field-based, clinical-based, or include a combination of all three. The field of tropical medicine requires knowledge of virology, bacteriology, parasitology, entomology, immunology, cell and molecular biology, epidemiology, ecology, behavioral science, and clinical medicine.

Pharmacology is a medical science concerned with the effects of drugs and chemicals on living organisms. The subject embraces knowledge of the chemistry, actions, absorption, fate, excretion, and uses of drugs. Traditionally, the greatest interests in drugs have been with the health professions. Today, however, knowledge of pharmacology and the allied field of toxicology are relevant to all segments of society.

Graduate Study

The department offers courses for undergraduate, medical, and graduate students. Faculty participate in the MD program by providing tutorial and elective courses in medical microbiology, clinical immunology, molecular biology, pharmacology, and clinical aspects of tropical medicine and pharmacology. Electives for medical students are team taught and coordinated with unit objectives throughout the problem-based learning curriculum. In addition, the department plays an important role in the Basic Science Foundation course, and participates in the Pathology Residency Program by offering rotations in selected aspects of medical virology, parasitology, and bacteriology.

Master’s Degree

Graduates with a master’s degree in tropical medicine have gone on to careers in science education at the secondary and college level, technical and research positions in universities, government agencies, and biotechnology companies, or have continued on in PhD and MD training programs at other universities.

Requirements

The MS degree requires 21 credits of course work, nine credits of thesis research, completion of a thesis, and a final oral examination. A general examination, oral or written, is required before a student is advanced to candidacy for the MS (Plan A) degree. Although not encouraged, in very unusual circumstances, a non-thesis MS (Plan B) may be allowed. This program requires 30 credits of course work, a written examination, and participation in a research project.

Doctoral Degree

Graduates with a PhD degree have pursued professional research, teaching, and administrative careers at various academic institutions, state and federal government agencies, international health agencies, and biotechnology companies.

Requirements

The tropical medicine PhD program requires course work as determined necessary by the student’s advisory committee, a qualifying examination, comprehensive examination, drafting a written research proposal, dissertation, and final oral examination/defense of dissertation. Students are encouraged to take course work covering a broad array of the disciplines involved in the field of tropical medicine, including course work offered by other academic departments as relevant to their area of concentration.
Faculty

Department faculty conduct active research in the following areas:

- virology and epidemiology of dengue, West Nile, and other flaviviruses
- diagnostic assays for flaviviruses
- hantavirus virology and epidemiology
- lentiviruses and polyomaviruses
- epidemiology and pathogenesis of hepatitis-associated viruses
- pathobiology and immunology of HIV and other retroviruses
- molecular epidemiology and evolution of viruses
- vaccines against paramyxoviruses using virus-like particles
- evaluation of hepatitis B infection and vaccination programs
- molecular and clinical epidemiology of streptococcal and staphylococcal infections
- malaria immunology and vaccine development
- malaria in pregnancy, maternal, and childhood immunity to malaria
- reproductive and developmental pharmacology
- emerging and re-emerging infectious diseases

Collaboration with infectious disease clinicians and international research institutes further expand research opportunities in the areas of HIV, Kawasaki disease, malaria, asthma, dengue, arboviruses, and zoonotic viruses. Research projects take place within the research laboratories in the department and at field sites in Africa, Asia, and the Pacific.

Pharmacology research within the department focuses on drug metabolism and pharmacokinetics. Research into developmental pharmacology in pregnancy and pediatric medicine is also a strong theme. The newly established human organ bank, in partnership with Organ Donor Center of Hawai‘i, is a central part of our translational research effort and provides tissues to researchers throughout the UH Mānoa and JABSOM campuses.

A major goal of the department is to provide Asian and Pacific countries the expertise needed to expand laboratory and epidemiologic capacity in tropical infectious diseases research. The department also has active research programs with several community hospitals and collaborates closely with the State of Hawai‘i Department of Health, providing instruction and expertise in bioterrorism preparedness and diagnosis of infectious diseases using the latest technology.
